

Fin Fan Air Coolers

Serck undertake complete refurbishment of fin fan air coolers on site and at any Serck workshops. Scope to be determined upon inspection and as per the clients requirement from complete, partial re-tubing, coating of fins, water jetting of tubes, fitting of liners in leaking tubes, combing of fins, fixing of fin supports to pressure testing as site. Serck are specialized in chemical cleaning by monitoring the ph levels and selection of chemicals based on tube materials. Our specialized team can mobilize in a short notice and perform the job as per the requirement. This can be done without disturbing any connections or disassembling of fans/motors

Fin Fan coolers upon serviced are coated with Heresite Coating to protect from highly corrosive atmosphere by providing 3 years guarantee without affecting the cooler performance.
